SLOW SEPTEMBER REDUCES FARM WORKER NUMBERS WAGE RATE RISE SLOWED BUT CONTINUES

The total of 7,211,000 persons working on the Nation's farms during the survey week of September 20-26 was 12 percent below a year earlier and at a record low for this period in late September. The number of hired workers fell sharply below a year earlier, totaling 2,134,000 persons, a reduction of 20 percent below the comparable period in 1963. Farm family members working on farms during the survey week totaled 5,077,000 persons--8 percent less than in the September 1963 comparable period.

The sharp reductions in worker numbers in the September 1964 survey week doubtless were caused by a combination of factors which varied in relative importance by geographic areas. Continued cool or damp weather in September was one leading factor throughout the South and parts of some North-Central areas. This held back the pace of cotton harvest in many principal growing areas with consequent reductions in hired workers from last year, amounting to 29 percent in both East South Central and West South Central Regions. The slower maturity and lagging harvest of cotton in September this year as compared with 1963 is shown by the cotton ginning report of the Bureau of the Census which shows nearly one-fourth less cotton ginned to October 1 than last year from a total crop almost as large as in 1963. Reports a year ago told of a flood of cotton backed up in gin yards. During the survey week weather in some areas was distinctly unfavorable; growers were confident that the increased number of cotton harvesting machines available would easily move the crop from fields to gins in coming weeks.

Cool, damp weather in September over large areas of Northern States held back the harvest of soybeans and corn and other late crops and materially reduced the needs for seasonal hired workers from levels of recent years. Much of the Northeastern part of the Nation had been in the grip of persistent drought for much of the summer, which curtailed growth of forage and reduced fruit sizes and potential income, all with bearish effect on farm employment in these areas. This new low for the September hired force thus appears to be in large part caused by a combination of seasonal factors which have hit in the designated survey week this year.

Family farm worker numbers during the September survey week also were generally lower State by State than a year earlier. Although the number of family workers was less affected than the hired working force by the delaying influence of the weather, the number reached a new low for late September both nationally and in most geographic regions. School activities possibly dominated the time of farm youngsters who in more rushing work conditions might have been pressed by Dad for a Saturday afternoon of farm work instead of being able to watch a football game. Farm family members other than operators who work less than 15 hours at farm work, without receiving cash wages, are not counted in

the family work force even though they make a considerable contribution to chores and many other aspects of farm work.

Farm Wage Rates up slightly in most areas

The Nation's farmers were paying for hired farm work at wage rates about 2 percent higher than last year. The average on October 1, 1964 computed from rates for all reported hiring arrangements was 694 percent of the 1910-14 average. The composite hourly rate averaged \$0.915, compared with \$0.898 a year ago. Composite averages include only the reported cash portions of total farm wages. The U.S. average for persons hired per hour without board or room furnished was \$1.01, up 2 percent from last year. Regional increases were sharpest in the East South Central and South Atlantic regions and lowest in the Northeast, possibly reflecting the influence of persistent drought. Persons hired per month with house furnished averaged \$206 per month compared with \$204 in October 1963. As usual, rates averaged highest in the Pacific region, followed in order by the Northeast and Mountain regions. The highest wage rates were reported for farm workers in Alaska, as follows: Per month with house, \$410; per month with board and room, \$300; per day and per hour without board and room, \$17.00 and \$2.10, respectively. Alaska farm workers during the survey week September 13-19 totaled 1700 persons, including 900 hired workers.

September Increases Harvest and Fall Seeding Activity

Late September in New England found the Aroostook Maine potato harvest going strong and over one-third completed, with quality and yields good. More machines than ever were being utilized in the harvest. The Massachusetts cranberry crop harvest was about one-fourth completed. In New York State dry weather and frost damage to corn had pushed silo filling ahead of usual timing and more than two-thirds of silage corn had been cut. Potato digging was active both on Long Island and upstate. Apple harvest increased throughout the Northeast in all producing areas. Grape harvest approached full volume in the Chautauqua-Erie and Finger Lakes sections of New York but lagged in Erie county Pennsylvania because of poor weather for ripening.

Ohio farms had a very dry September, but reports showed about 35 percent of winter wheat seeded and less than half the soybeans combined. In Illinois, soybean combining was only about two-fifths finished and wheat seeding only one-third completed. Michigan dry bean harvest was progressing more slowly than last year. Harvest of late variety apples was increasing; peach and pear harvests were finished and grape harvest starting. Westward into Wisconsin September rains were heavier and wet fields slowed work of filling silos and digging potatoes. Cranberry harvest was active.

The important Red River Valley acreages of potatoes and sugar beets in North Dakota and Minnesota had cool wet weather in late September, and, although potato digging and sugar beet lifting were active, it took two tractors to drag one machine in some fields. The ripening of Iowa corn and soybeans was slowed by the cool wet month, but most silo filling was completed and much seed corn harvested. Heavy September rainfall in Missouri also retarded harvest of fall crop, but many farmers could see their cattle thriving on the best fall pastures in many years. Eastern parts of South Dakota and Nebraska also were blanketed by the cool damp weather. In many sections where fall grains are important the work of seeding was running at least 10 days late but by the end of the month was 70 percent completed in Kansas. Soybean harvest in Nebraska and Kansas was just starting.

1/ Average rates paid on crop and livestock reporters' farms or in their localities for arrangements specified above. U.S. averages and State composite rates include estimates for unpublished State rates of small importance. 2/ Adjusted for seasonal variation.

Note: For Alaska rates see comments, Page 2.

The delayed progress of cotton harvest throughout the South was only one part of the farm scene. Peanut harvest was getting under way in the Virginia-North Carolina area and was nearing completion in Georgia, Alabama, and Florida. After hurricane Dora blew through north central Florida and southern Georgia there were fewer pecans to pick. However, the valuable citrus crop was missed, and grove condition remained excellent. Vegetable land preparation and planting were active. Alabama cotton harvest was almost half finished in September. Mississippi had some good weather, and, although cotton maturity was behind last year, about a fifth of the State's crop was picked.

Arkansas fall crops made slow progress in September with cotton harvest only 15 percent finished; rice harvest was one-fourth finished and ready to move ahead fast. Louisiana cotton was about one-third harvested while planting of sugarcane reached 80 percent of completion. About one-third of Oklahoma's winter wheat had been seeded and much had emerged. Mung beans and broomcorn were being harvested. Texas cotton harvest was almost at a standstill during the survey week with about one-third picked for the State. Nine-tenths of the State's corn and six-tenths of the grain sorghum had been harvested. Wheat seeding passed the one-fourth mark but was much less advanced than last year.

Many sections in Mountain and Pacific States had plenty of clear weather for the large variety of harvest jobs, seeding fall grains, and caring for livestock. Fruit harvests were especially important in the Yakima and Wenatchee Valleys in Washington, the Hood River and Rogue River Valley of Oregon, and in the many extensive plantings in California which supply important quantities of nearly the entire range of fruit and nut specialties. The widely publicized fires which ravaged homesites in the Napa-Sonoma area of the State caused no serious damage to the prized wine grapes of the area.
